

## Lynden School District IT Guide: Connecting to the guest Wi-Fi network with an iPad

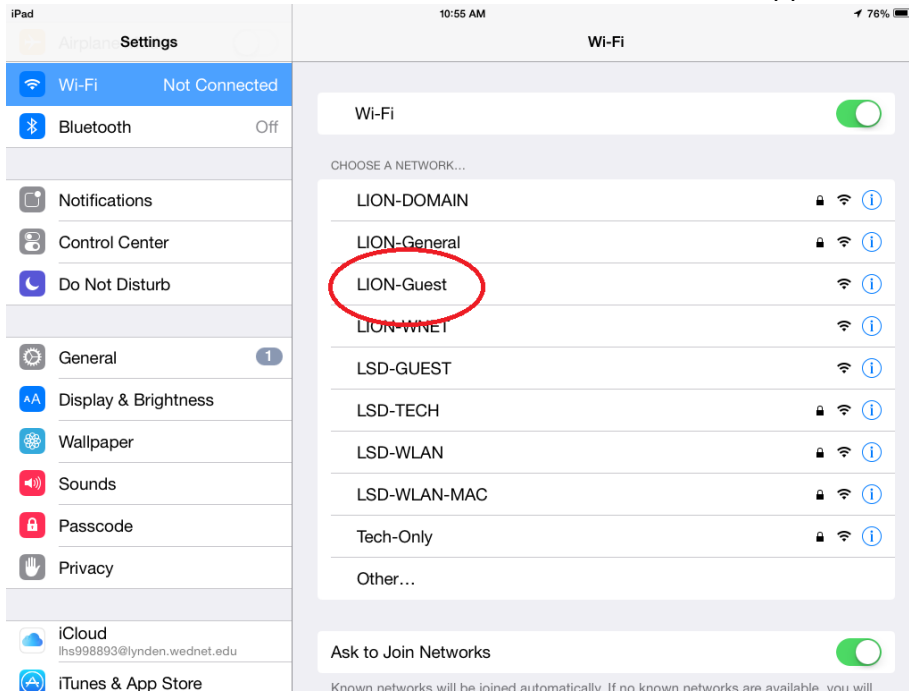

These instructions show settings and selections for connecting an iPad. Other types of phones and tablets should be able to use these procedures as a guide for the specific steps their device uses.

Note: Before you begin, you will need a special guest id and password obtained from the office or a staff member. District staff and student accounts do not function on the guest network, a guest id is required.

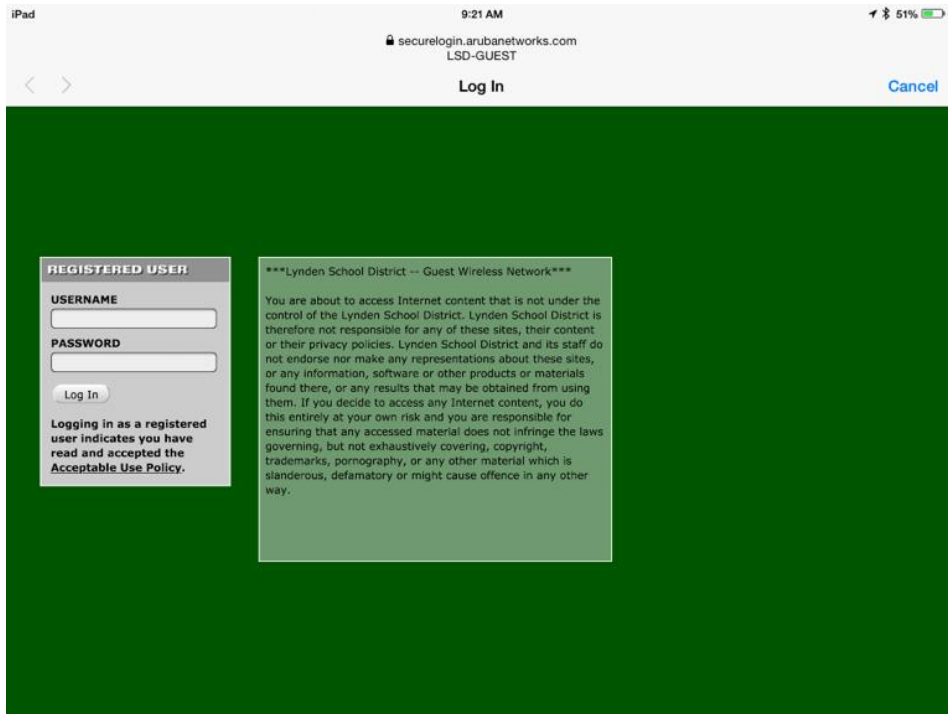

At the iPad, select “Settings”

Then select “Wi-Fi” on the left. When the list of networks appears, select “LION-Guest”

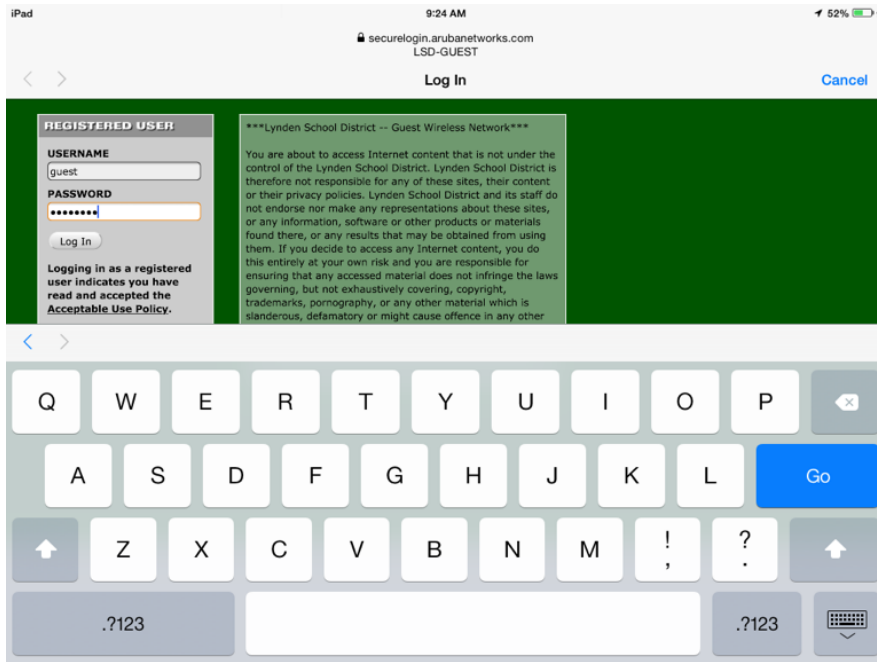

Once the connection is successful, you should see the login screen:

Click on the underlined link to read the acceptable use policy. Logging in indicates that you have read and accepted the policy.

Enter the id and password given to you. Reminder: This screen ONLY allows guest accounts, a standard student or staff account will not work

The screen will show a redirection page which you may close. At this point you have a connection to the internet.
